INDEX

1.Write a PHP script to swap two numbers.

2 Write a PHP script to find the factorial of a number.

3 Write a PHP script to reverse a given number and calculate its sum.

4 Write a PHP script to generate a Fibonacci series using Recursive function.

5 Write a PHP script to implement constructor and destructor.

6. Write a PHP script to implement form handling using get method.

7. Write a PHP script to implement form handling using post method.

8. Write a PHP script that receives form input by the method post to check the number is prime or not.

9. Write a PHP script that receives string as a form input.

10. Write a PHP script to compute addition of two matrices as a form input.

11. Write a PHP script to show the functionality of date and time function.

12. Write a PHP program to upload a file.

13. Write a PHP script to implement database creation.

14. Develop a PHP program to design a college admission form using MYSQL database.

OUTPUT:

OUTPUT:

1. Write a PHP script to swap two numbers.

```
<?php
   $a = 10; $b = 20;
   list($a, $b) = array($b, $a);
   echo "a = $a, b = $b";
?>
```

2. Write a PHP script to find the factorial of a number.

```
<?php
function factorial($n)
{
   return $n == 0 ? 1 : $n * factorial($n - 1);
}
   echo factorial(5);
?>
```

OUTPUT:

OUTPUT:

3. Write a PHP script to reverse a given number and calculate its sum.

```
<?php
    $num = 1234; $rev = 0; $sum = 0;
    while($num != 0)
    {
        $digit = $num % 10;
        $rev = $rev * 10 + $digit;
        $sum += $digit;
        $num = intdiv($num, 10);
    }
    echo "Reverse: $rev, Sum: $sum";
?>
```

4. Write a PHP script to generate a Fibonacci series using Recursive function.

```
<?php
    function fibonacci($n)
    {
        return $n <= 1 ? $n : fibonacci($n-1) + fibonacci($n-2);
    }
    for($i = 0; $i < 10; $i++)
    {
        echo fibonacci($i) . " ";
    }
?>
```

OUTPUT:

OUTPUT:

5. Write a PHP script to implement constructor and destructor.

```
<?php
    class MyClass {
        function  __construct() { echo "Constructor Called<br>"; }
        function  __destruct() { echo "Destructor Called"; }
    }
    $obj = new MyClass();
?>
```

6. Write a PHP script to implement form handling using get method.

```
<?php
    if($_SERVER["REQUEST_METHOD"] == "GET")
    {
        echo "Hello, ". $_GET['name'];
    }
?>
<form method="GET">
    Name: <input type="text" name="name"><br>
    <input type="submit">
</form>
```

OUTPUT:

7. Write a PHP script to implement form handling using post method.

```
<?php
   if($_SERVER["REQUEST_METHOD"] == "POST")
   {
      echo "Hello, ". $_POST['name'];
   }
?>
<form method="POST">
   Name: <input type="text" name="name"><br>
   <input type="submit">
</form>
```

OUTPUT:

8. Write a PHP script that receives form input by the method post to check the number is prime or not.

```
<?php
    function isPrime($num)
    {
        for($i = 2; $i <= sqrt($num); $i++)
        {
            if($num % $i == 0) return false;
        }
        return $num > 1;
    }
    if($_SERVER["REQUEST_METHOD"] == "POST") {
        $num = $_POST['number'];
        if(isPrime($num)) {
            echo "$num is a prime number.";
        } else {
            echo "$num is not a prime number.";
        }
    }
?>
<form method="POST">
        Enter a number: <input type="number" name="number" required>
        <input type="submit" value="submit">
</form>
```

OUTPUT:

9.Write a PHP script that receives string as a form input.

```
<?php
    if($_SERVER["REQUEST_METHOD"] = "POST"){
        $inputString = $_POST['inputString'];
        echo "You entered: ".$_POST['inputString'];
    }
?>
<form method="POST">
    Enter String: <input type="text" name="inputString"><br>
    <input type="submit">
</form>
```

OUTPUT:

10.Write a PHP script to compute addition of two matrices as a form input.

```
<?php
if($_SERVER["REQUEST_METHOD"] == "POST")
{
    // Get matrix input as strings, then convert them into 2D arrays
    $matrix1 = array_map('str_getcsv', explode("\n", $_POST['matrix1']));
    $matrix2 = array_map('str_getcsv', explode("\n", $_POST['matrix2']));

// Initialize the result matrix
    $result = array();

    // Check if matrices are of the same size
    $rows1 = count($matrix1);
    $cols1 = count($matrix1[0]);
    $rows2 = count($matrix2);
    $cols2 = count($matrix2[0]);

    if($rows1 == $rows2 && $cols1 == $cols2) {
        // Perform matrix addition
        for($i = 0; $i < $rows1; $i++) {
            for($j = 0; $j < $cols1; $j++) {
                $result[$i][$j] = $matrix1[$i][$j] + $matrix2[$i][$j];
            }
        }

        // Display result
        echo "<h3>Resulting Matrix:</h3>";
```

```
        echo "<table border='1'>";
        for($i = 0; $i < $rows1; $i++) {
            echo "<tr>";
            for($j = 0; $j < $cols1; $j++) {
                echo "<td>" . $result[$i][$j] . "</td>";
            }
            echo "</tr>";
        }
        echo "</table>";
    } else {
        echo "Matrices must have the same dimensions!";
    }
}
?>
<form method="POST">
    <h3>Enter Matrix 1 (rows separated by new lines, values separated by commas): </h3>
    <textarea name="matrix1" rows="4" cols="50"></textarea> <br> <br>
    <h3>Enter Matrix 2 (rows separated by new lines, values separated by commas): </h3>
    <textarea name="matrix2" rows="4" cols="50"></textarea><br><br>
    <input type="submit" value="Add Matrices">
</form>
```

OUTPUT:

11.Write a PHP script to show the functionality of date and time function.

```
<?php
   echo "Today is: " . date("d/m/y") . "<br>";            //date()
   echo "Today is: " . date("Y/M/d") . "<br>";
   $curtime = time();   //time()
   echo(date("h:i:s", $curtime)."<br>");
   echo(date("H:i:s a", $curtime)."<br>");
   $curdate = gmdate("d-m-y", $curtime);     //gmdate()
   echo $curdate."<br>";
   $date = idate("H", time()); //idate()
   echo $date."<br>";
   $date1 = new DateTime("12-03-2025");    //date_add()
   $date1->add(new DateInterval("P5D"));
   echo $date1->format("d-m-Y")."<br>";
   $date2 = new DateTime("12-03-2025");    //date_diff()
   $date3 = new DateTime("17-03-2025");
   $x = $date2->diff($date3);
   echo $x->format("%R%a days")."<br>";
